

More robust survey options, or ability to link to an external survey

I would like to see either some more robust survey features like those you might find available in Qualtrics. Currently, we are very limited to the type of feedback we can ask for, which does not meet our needs. It would be nice to have this incorporated into the WHD software, rather than have to perform manual surveying. If this is not an option, it would be nice to have the option to use other tags in emails that would allow us to include a hyperlink to an external survey without having to use the awkward URLs to the surveys that Qualtrics provides.
