

# Restore the URL format for IPAM node custom properties

---

As of IPAM 4.8.1 the HTML format for custom properties has gone.

Given that html code inserted into Text format is not rendered as such, this is the only one-step way of putting a link on a node page.

I used this to solve the lack of integration between IPAM and NPM - <https://thwack.solarwinds.com/docs/DOC-203681#comment-324426>

Updated to reflect the original datatype name - URL.
