

# Integration with 3rd party solutions - Page on Thwack

---

Hi Thwacksters,

Orion platform has matured and we see more and more platform enhancements - Database performance, web performance, enhanced alerting, reporting and dashboarding. Each of the modules, Networking modules like NPM, NCM, NTA, IPAM, UDT, VNQM and the System modules like SAM, SRM, DPA, WPM, SCM continue to see new features and functions.

Many of us may now be wanting to "INCLUDE" the Solarwinds solution sets into the entire IT environment comprising other solution sets including

- Help Desk and ITSM solutions (not necessarily from Solarwinds - BMC Remedy, CA, ServiceNow ..)
- Asset Management tools
- Collaboration tools (Microsoft Teams, Slack, WhatsApp)
- SMS Gateways
- Operations Management solutions like MicroFocus OMi, OpsGenie, Chargeback solutions .. the list could be endless.

It could be worthwhile to explore if an INTEGRATIONS page could be put up on Thwack to help the community in learning and integrating Solarwinds solutions with other complementary and supplementary solutions.

We are aware of many of these integrations done by subject matter experts and see quite a few posts on such topics on Thwack, it maybe a good idea to club them under a separate section, making it easier to navigate and explore. All Thwacksters are requested to add to the list of tools and post their success stories too.

While Product Forums pages have been serving us well to learn and deploy newest features, a section on Integrations on Thwack may help
